

How to login to Mtivity via an external Internet/Intranet Site

The Mtivity application supports the submission of an Mtivity account's username and password via an HTML link.

Typically the username for Mtivity is the account holder's email address.

The external system should generate a HTML link with the format detailed below and present that link to the end user, clicking on the link will seamlessly navigate the end user from the external site to the Mtivity application without the need to enter their username and password.

The make up of the link is demonstrated below, Square Brackets - [] have been used to mark where variables are to be entered. (Note the variables you insert should not include the square brackets)

Your generated link must use https not http !

Link format

```
<a href="https://web1.mtivity.com/apps/DcLogin.csp?username=[user's Mtivity username]&password=[User's Mtivity password]"/>[Text user will see for the HTML Link]</a>
```

e.g

```
<a href="https://web1.mtivity.com/apps/DcLogin.csp?username=user@domain.com&password=989fdjjw993"/>Click here to access the marketing portal</a>
```
